To overcome address challenges in Mali’s Home Grown School Feeding implementation, the Ministry of Education and partners including PCD, Dutch development organisation, SNV and the World Food Programme developed a "Stratégie de Pérennisation de l’Alimentation Scolaire" (Sustainable School Feeding Strategy) to further support activities in Mali, enhancing capacity building and technical assistance for successful transitioning to sustainable programmes. Essentially, this is an advocacy document, providing clear guidance on the needs and priorities for assistance.

The first phase of the strategy covers a period of three years (2013 – 2015), and after each year a periodic review will take place. PCD, WFP supported the Mali’s National Center of School Canteens in the preparation and finalization of this document, and they continue to play a large role in school feeding implementation.
